Troubleshooting

Check Ghostscript installation
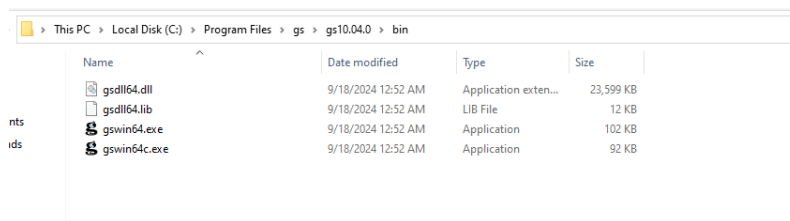

Open cmd (command prompt). Run **gswin64c.**

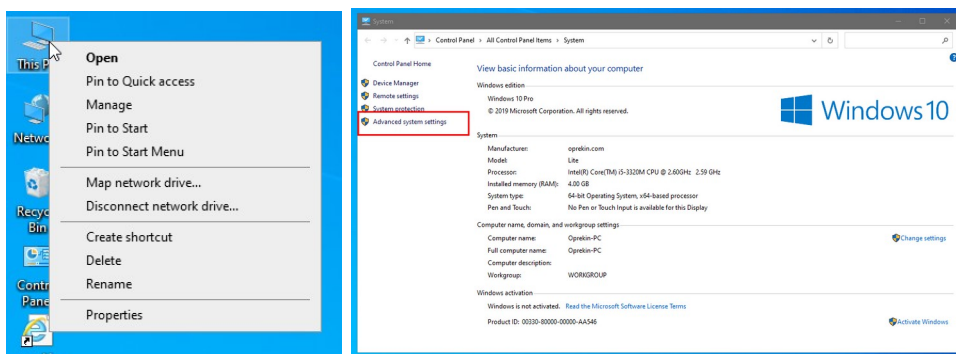

Output will show **GS>** along with version of Ghostscript.

If this command is not recognized, check ghostscipt installation path in C:\Program Files\gs\gs10.0.40.

If this folder is present and gswin64c is present inside bin folder in above path, add path to environmental variable.

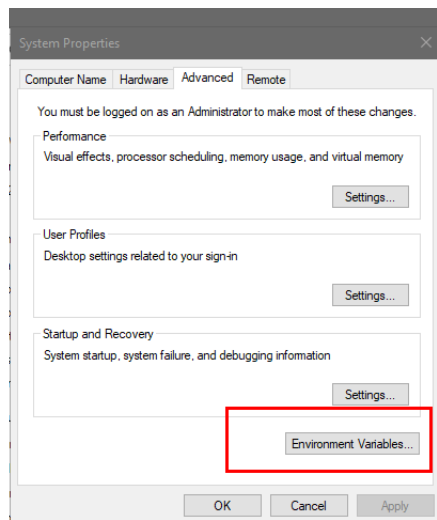

Steps:

Right click **This PC**. Open **Properties**. Window on right side will show up.

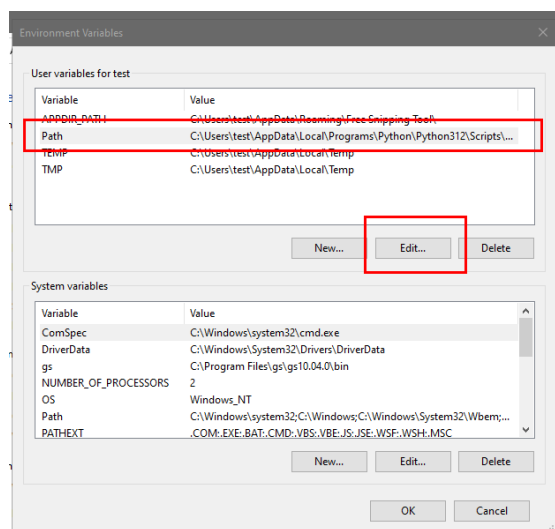

Alternatively, open this from Settings/Control Panel > System.

From there, open **Advanced System Settings** as shown in screenshot above.

From **Advanced** Tab, choose **Environment Variables**. Now click on **path** and click **Edit**.

Now click **New** and add path to ghsotscript bin folder there (C:\Program Files\gs\gs10.0.40/bin) and click **OK**. The path will appear like below. Now check ghostscript installation again from command prompt again. It will show the version details.
